

By Clare Mishica • Art by Josh Lewis

Katie Cater is hosting a big Thanksgiving meal for her friends and family, and it's time for dessert! Katie wants to rearrange the treats on the trays so that each of the red trays has the same number of cookies, each of the yellow trays has the same number of pumpkin-pie slices, and each of the orange trays has the same number of caramel apples. How many treats should be on each tray?

Katie Cater's cousins Ava, Brayden, and Carter made the desserts for their Thanksgiving gathering. Katie wants to write thank-you notes, but she can't remember which cousin brought each treat. Use the clues to help her figure out who made each dessert.

## CLUES

- Carter's dessert starts with the same letter as his name.
- Ava did not make cookies.
- Brayden's treat is served on a stick.

**BONUS!**  
Find two matching caramel apples.
